## ALGEBRA II

Chapter 13 section 6
Apply the Law of Cosines
pg. 889
FOCUS:
In which cases can the law of cosines be used to solve a triangle?

## VOCAB:

Law of Cosines: $\qquad$

WARM - UP:
Solve $\triangle \mathrm{ABC}$ with the given parts.

1. $A=75^{\circ}, B=82^{\circ}, C=16$
2. $B=131^{\circ}, b=52$, and $c=38$
3. Two sides of a triangular lot are each 80 feet long, and the angle between these two sides is $110^{\circ}$. Find the area of the lot.

## NOTES:

Solve $\triangle A B C$ with...

$$
a=22 \quad b=15 \quad C=108^{\circ}
$$

$$
a=19 \quad b=26 \quad c=31
$$

The lengths of the sides of a triangular plot of land are 120 feet, 150 feet, and 175 feet. Find the largest angle of the triangle.

## HERON'S AREA FORMULA

The area of the triangle with sides of length $a, b$, and $c$ is

$$
\text { Area }=\sqrt{s(s-a)(s-b)(s-c)}
$$

where $s=1 / 2(a+b+c)$. The variable $s$ is called the semiperimeter, or half - perimeter, of the triangle .

Find the area of traffic triangle with sides 750 feet, 410 feet, and 620 feet.

Let's see if you comprehended what we worked on in class...
